

How to Protect Against Business Email Compromise (BEC)

Business Email Compromise attacks are increasingly sophisticated and can lead to significant financial losses, reputational damage, and data breaches. Protecting against BEC is a critical step. Use this simple checklist to ensure you get the critical protection required for comprehensive security.

24x7 Monitoring & Expert Support

Continuous monitoring of suspicious account activity by cybersecurity experts who help guide your team through remediation & threat resolution.

Alerting & Threat Isolation

Contain suspicious activities and prevent further access if an account is compromised. Concise alerts and comprehensive incident reports enable quick action without unnecessary interruptions.

Phishing Detection

Detect and flag phishing emails that could lead to BEC *before* they reach your employees' inboxes to minimize risk.

Business Continuity

Proactive monitoring and rapid response minimize downtime and losses for your business when targeted by BEC scams.
